DOE608 - Course Validation

Contents

- **DOE608 - Course Validation**
 - Contents
 - Course Materials
 - What this course covered
 - Validation of Acquired Knowledge
 - Course Evaluation

Course Materials

Access to the course materials, as well as to the LABS and Validation of Acquired Knowledge, is provided through an annual subscription per trainee to a web-based course platform.

The subscription allows trainees to:

- redo the LABS in autonomous mode,
- consult updated course content during the subscription period,
- exchange with other participants in the session and with former trainees.

What this course covered

- **DOE600 - Course Presentation**

- Prerequisites
 - Hardware
 - Software
 - Internet
- Use of the Infrastructure
- Curriculum

- **DOE601 - Virtualisation by Isolation**

- Presentation of Virtualisation by Isolation
 - History
- Presentation of Namespaces
- Presentation of CGroups
 - LAB #1 - cgroups v1
 - 1.1 - Preparation
 - 1.2 - Presentation
 - 1.3 - Memory Limitation
 - 1.4 - The cgcreate command
 - 1.5 - The cgexec command
 - 1.6 - The cgdelete command
 - 1.7 - The /etc/cgconfig.conf file
 - 1.8 - The cgconfigparser command
 - LAB #2 - cgroups v2
 - 2.1 - Preparation
 - 2.2 - Overview
 - 2.3 - Limiting CPU Resources
 - 2.4 - The systemctl set-property command
- Introducing Linux Containers
 - LAB #3 - Working with LXC
 - 3.1 - Installation
 - 3.2 - Creating a Simple Container
 - 3.3 - Starting a Simple Container
 - 3.4 - Attaching to a Simple Container
 - 3.5 - Basic LXC Commands
 - The lxc-console Command

- The lxc-stop Command
- The lxc-execute Command
- The lxc-info Command
- The lxc-freeze Command
- The lxc-unfreeze Command
- Other Commands
- 3.6 - Creating an Ephemeral Container
 - The lxc-copy Command
- 3.7 - Saving Containers
 - The lxc-snapshot Command

- **DOE602 - Getting started with Docker**

- Introduction to Docker
 - Virtualisation and Containerisation
 - The AUFS File System
 - OverlayFS and Overlay2
 - Docker Daemon and Docker Engine
 - Docker CE and Docker EE
 - Docker CE
 - Docker EE
 - Docker and Mirantis
- LAB #1 - Working with Docker
 - 1.1 - Installing docker on Linux
 - Debian 11
 - CentOS 8
 - 1.2 - Starting a Container
 - 1.3 - Viewing the list of Containers and Images
 - 1.4 - Searching for an Image in a Repository
 - 1.5 - Deleting a Container from an Image
 - 1.6 - Creating an Image from a Modified Container
 - 1.7 - Deleting an Image
 - 1.8 - Creating a Container with a Specific Name
 - 1.9 - Executing a Command in a Container
 - 1.10 - Injecting Environment Variables into a Container

- 1.11 - Modifying a Container Host Name
- 1.12 - Mapping Container Ports
- 1.13 - Starting a Container in Detached mode
- 1.14 - Accessing Container Services from the Outside
- 1.15 - Stopping and Starting a Container
- 1.16 - Using Signals with a Container
- 1.17 - Forcing the deletion of a running Container
- 1.18 - Simply using a Volume
- 1.19 - Downloading an image without creating a Container
- 1.20 - Attaching to a running Container
- 1.21 - Installing software in a Container
- 1.22 - Using the docker commit command
- 1.23 - Connecting to the container from the outside

- **DOE603 - Managing and Storing Docker Images**

- LAB #1 - Re-creating an official docker image
 - 1.1 - Using a Dockerfile
 - 1.2 - FROM
 - 1.3 - RUN
 - 1.4 - ENV
 - 1.5 - VOLUME
 - 1.6 - COPY
 - 1.7 - ENTRYPOINT
 - 1.8 - EXPOSE
 - 1.9 - CMD
 - 1.10 - Other commands
- LAB #2 - Creating a Dockerfile
 - 2.1 - Creating and testing the script
 - 2.2 - Good Cache Practices
- LAB #3 - Installing a Private Registry
 - 3.1 - Creating a Local Registry,
 - 3.2 - Creating a Dedicated Registry Server
 - Configuring the Client

- **DOE604 - Volume, Network and Resource Management**

- LAB #1 - Volume Management
 - 1.1 - Automatic management using Docker
 - 1.2 - Manual Volume Management
 - 1.3 - Manual management of a Bindmount
- LAB #2 - Network Management
 - 2.1 - The Docker Network Approach
 - Bridge
 - Host
 - None
 - Links
 - 2.2 - Running Wordpress in a container
 - 2.3 - Managing a Microservices Architecture
- LAB #3 - Monitoring Containers
 - 3.1 - Logs
 - 3.2 - Processes
 - 3.3 - Continuous Activity

- **DOE605 - Docker Compose, Docker Machine and Docker Swarm**

- LAB #1 - Docker Compose
 - 1.1 - Installation
 - 1.2 - Installing Wordpress with Docker Compose
- LAB #2 - Docker Machine
 - 2.1 - Introduction
 - 2.2 - Creating Docker Virtual Machines
 - 2.3 - Listing Docker VMs
 - 2.4 - Obtaining VM IP addresses
 - 2.5 - Connecting to a Docker VM
- LAB #3 - Docker Swarm
 - 3.1 - Overview
 - 3.2 - Initializing Docker Swarm
 - 3.3 - Leader status
 - 3.4 - Joining the Swarm
 - 3.5 - Viewing Swarm Information
 - 3.6 - Starting a Service

- 3.7 - Scaling Up and Scaling Down a Service
- 3.8 - Checking Node Status
- 3.9 - High Availability
- 3.10 - Deleting a Service
- 3.11 - Backing up Docker Swarm
- 3.12 - Restoring Docker Swarm

- **DOF606 - Overlay Network Management with Docker in Swarm mode**

- The Docker Network Model
- LAB #1 - Overlay Network Management
 - 1.1 - Creating a network overlay
 - 1.2 - Creating a Service
 - 1.3 - Moving the Service to another Overlay Network
 - 1.4 - DNS container discovery
 - 1.5 - Creating a Custom Overlay Network
- LAB #2 - Microservices Architecture Management
 - 2.1 - Implementing Docker Swarm with overlay networks

- **DOF607 - Docker Security Management**

- LAB #1 - Using Docker Secrets
- LAB #2 - Creating a Trusted User to Control the Docker Daemon
- LAB #3 - The docker-bench-security.sh script
- LAB #4 - Securing the Docker Host Configuration
- LAB #5 - Securing the Docker daemon configuration
 - 5.1 - The /etc/docker/daemon.json file
- LAB #6 - Securing Images and Build Files
- LAB #7 - Securing the Container Runtime
- LAB #8 - Securing Images with Docker Content Trust
 - 8.1 - DOCKER_CONTENT_TRUST
 - 8.2 - DCT and the docker pull command
 - The disable-content-trust option
 - 8.3 - DCT and the docker push command
 - 8.4 - DCT and the docker build command
 - Creating a second Repository
 - Deleting a signature

- LAB #9 - Securing the Docker daemon socket
 - 9.1 - Creating the Certificate Authority Certificate
 - 9.2 - Creating the Docker Daemon Host Server Certificate
 - 9.3 - Creating the Client Certificate
 - 9.4 - Starting the Docker Daemon with a Direct Invocation
 - 9.5 - Configuring the Client
- **DOE608 - Course Validation**
 - Course Materials
 - What this course covered
 - Validation of acquired knowledge
 - Course Evaluation

Training Evaluation

To validate your training, please complete the Training Evaluation and the Validation of Acquired Knowledge.
